

Have you heard about Artige's improved Services Division?

Aspiring for world-class profit?

Shop Floor Controls

The low cost provider of internet-based real-time systems has added quality, process and project management services, a natural progression that stems from our expertise in operations research (OR) that we have been applying in our consulting practice over the years. Using proven OR methodologies, Artige's Services Division now offers solutions for workflow, scheduling and queuing dilemmas, improving your bottom line.

Short handed?

We still offer traditional IT services of system integration and custom application building. Our experience includes system architecture, database design, programming (web or stand-alone applications), and training in IT, quality and manufacturing areas. We can automate your operation, be it cash, work orders or machinery. We excel in interfacing even the most disparate of systems. Consider the Artige Company for your next computing project.

Interfaces to Financial systems

The low cost provider of internet-based real-time systems has added quality, process and project management services, a natural progression that stems from our expertise in operations research (OR) that we have been applying in our

Satisfied Clients

- SunChemical: Formula lookup system.
- Reed-Elsevier: Data migration, web-based "bingo card" annual ad campaign.
- eschoolmall.com: XML-based catalog importing system.
- GMAC Commercial Mortgage: DBA services, succession training.
- Sovereign Bank: XML Interface for Lending Tree leads, off-hours remote monitoring.

We are local to Berks, Chester and Lancaster, serving southeastern PA and northern DE.

Background

The chief consultant and head of the Artige Company, Ralph Hilken, oversees the consulting services. He brings along over 25 years of engineering, process control, OR and IT experience in the baking, banking & finance, computing, chemical, metallurgical, printing and publishing industries. He has worked or consulted for ASARCO, Dupont, Handy & Harman, and the USPO, plus taught at Bridgeport Engineering Institute, Peirce College and Villanova University. Ralph led the shop floor controls project for DuPont's Singapore Lycra® greenfield plant, and has co-authored the textbook titled "Introduction to Applied XML Technologies in Business".
